Summary

Computer Science Graduate Computer Science student with a strong interest in AI automation, software development, and scalable digital solutions. Experienced through academic, self-learning, and freelance projects in developing applications, automating workflows, and exploring emerging technologies. Skilled in Python, C++, JavaScript, TypeScript, Next.js, MongoDB, Tailwind CSS, Flutter, and FastAPI, with exposure to AI integrations, web development, SEO, and digital marketing applications. Passionate about bridging technical development and business objectives through user focused problem-solving, software design, and intelligent automation. Continuously expanding expertise in AI systems, including prompt and context engineering, agent-based workflows, Retrieval-Augmented Generation (RAG), and vector databases to create more accurate, context-aware, and scalable solutions.

Education

Bachelor of Science in Computer Science, IQRA University 01/2022 – 02/2026 | Islamabad
CGPA: 3.41 (85.3%) Note: I completed my degree in BSCS (Bachelor of Science in Computer Science). A scholarship certificate was awarded to me as initially when I enrolled in BBA at the Iqra University H-9 campus and completed my 1st semester there with a CGPA of 3.8/4.0 and then transferred to BSCS on request and approval by the university and hence I started over from the 1st semester in BSCS.

A-Level – Computer Science, Pak-Turk Maarif International Schools and Colleges 01/2019 – 01/2021 | Islamabad

Projects

AI Content Automation Stack, Self-Learning Based 01/2025 – Present

- Developed an end-to-end pipeline to automate AI avatar advertisement campaigns, spanning from market research to final video delivery.
- Architected a multi-stage automation workflow utilising AI tools for sentiment analysis, script-writing, and voice generation
- Campaigned for the adoption of AI video tools and maximized output consistency by scaling ad production via digital avatars
- Analysed consumer data and market trends to optimise ad delivery and ensure alignment with brand objectives
- Unified disparate AI tools into a single technical stack to streamline the digital marketing life cycle.

Software Requirements & U/X Analysis Academic Project, IQRA University H-9 Islamabad FYP 07/2025 – 01/2026

- Conducted UX-focused analysis and requirements structuring within a multi-tool cybersecurity Final Year Project involving CLI-based utilities and supporting web-based interfaces for security operations.
- Facilitated structured requirement elicitation discussions with team members to define system boundaries, tool functionalities, and user interaction flows for a multi-tool cybersecurity platform
- Contributed to heuristic evaluation sessions by identifying usability issues in CL and web-based tool interactions, focusing on workflow clarity and operational efficiency
- Assisted in cognitive walk-through analysis of core system tools such as encryption/decryption modules, vulnerability analysis workflows, and brute-force simulation utilities to improve user navigation and task execution flow
- Translated system-level functional requirements into organized technical documentation and UX flow structures, ensuring alignment between development implementation and user interaction design principles
- Supported prototype evaluation discussions aimed at reducing friction between technical security operations and user-facing interface layers, improving overall system usability

Skills

Practical — Beginner AI-driven, AI integrations, AI systems, AI avatar, Prompt Engineering, Context Engineering, Agent-based workflows, Retrieval-Augmented Generation (RAG), Vector Databases	Software Development — Competent Scalable Digital Solutions, Web Development, SEO, Digital Marketing
Frameworks — Competent C++, JavaScript, TypeScript, Next.js, MongoDB, Tailwind CSS, Flutter, FastAPI	Video Editing — Proficient Canva, Copywriting
Project management — Competent GitHub	

Certifications

Game Design and Development 1: 2D Shooter Coursera via Michigan State University Date: 03/2025	Unreal Engine 5 Environment Design Coursera via Epic Games Date: 01/2025
