SUMMARY

Innovative Computer Science Student and inspiring Entrepreneur specializing in AI automation and scalable business workflows. Expertise in deploying technical stacks for content automation and digital management systems. Adept at bridging technical development and strategic operations through disciplined problem-solving and software design. Committed to engineering user-centric systems that leverage emerging technologies to optimize productivity and enhance digital experiences.

EDUCATION

BACHELOR OF SCIENCE IN COMPUTER SCIENCE IQRA UNIVERSITY, ISLAMABAD GPA: 3.41	2022 – 2026
A-LEVEL – COMPUTER SCIENCE Pak-Turk Maarif International Schools and Colleges	2019 – 2021

SKILLS

Technical Skills - Copywriting - Video Editing - AI-driven Automation - Computer Literacy - Project Management Tools	Soft Skills - Critical-Thinking - Problem Solving - Time-Management - Adaptability - Strong Communication
---	--

LANGUAGES

English Native	Urdu Native
--------------------------	-----------------------

CERTIFICATIONS

Fundamentals of Graphic Design, Coursera	XBOX via Coursera Date: 2025-05-15
---	--

PROJECTS

AI Content Automation Stack Personal Project Developed an end-to-end pipeline to automate AI avatar advertisement campaigns, spanning from market research to final video delivery. - Architected a multi-stage automation workflow utilizing AI tools for sentiment analysis, scriptwriting, and voice generation - Campaigned for the adoption of AI video tools and maximized output consistency by scaling ad production via digital avatars - Analyzed consumer data and market trends to optimize ad delivery and ensure alignment with brand objectives - Unified disparate AI tools into a single technical stack to streamline the digital marketing lifecycle	2025 – Present
Software Requirements & UX Analysis Academic Project Conducted UX-focused analysis and requirements structuring within a multi-tool cybersecurity Final Year Project involving CLI-based utilities and supporting web-based interfaces for security operations. - Facilitated structured requirement elicitation discussions with team members to define system boundaries, tool functionalities, and user interaction flows for a multi-tool cybersecurity platform - Contributed to heuristic evaluation sessions by identifying usability issues in CLI and web-based tool interactions, focusing on workflow clarity and operational efficiency - Assisted in cognitive walkthrough analysis of core system tools such as encryption/decryption modules, vulnerability analysis workflows, and brute-force simulation utilities to improve user navigation and task execution flow - Translated system-level functional requirements into organized technical documentation and UX flow structures, ensuring alignment between development implementation and user interaction design principles - Supported prototype evaluation discussions aimed at reducing friction between technical security operations and user-facing interface layers, improving overall system usability	2026 – Present
